

CORRECTION AND ADDITION TO THE POLYPODIACEOUS FERNS OF INDIA

MRITTUNJAI SRIVASTAVA and SUBHASH CHANDRA

Pteridology Laboratory, National Botanical Research Institute, Lucknow- 226001, India.

The nomenclature of 56 taxa enumerated in Polypodiaceous ferns of India by Satija and Bir has been updated. During the revision 23 taxa have also been added and 4 taxa have been found doubtful hence excluded.

Keywords: Corrections; Ferns; Nomenclature changes; Polypodiaceae.

Introduction

The Pteridophytes constitute the most primitive group of vascular plants and are comparatively well represented in modern flora, the Filicopsida or the group of ferns are the most predominant among Pteridophytes, considering the richness of the genera and species and their wide geographical distribution. On account of their central position in the world of higher plants and their great antiquity, the Pteridophytes have attracted the attention of botanists more than any other group of plants. Never-the-less they remain yet one of the most controversial with regard to their taxonomy and phylogeny.

The old comprehensive family Polypodiaceae was divided into 15 subfamilies¹ and it was suggested that they might better be considered as families of which two subfamilies Dipteridoideae and Polypodioidae have been merged into vast family Polypodiaceae². The most adventurous treatment of the old group polypodiaceae is by Ching³ in which he divided it into 33 natural families of which six families (Loxogrammaceae, Cheiroleuriaceae, Dipteridaceae, Platyceriaceae, Polypodiaceae, Grammitidaceae) have been merged in Polypodiaceae by Copeland². Pichi Sermolli⁴⁻⁶ on the other hand has grouped the Polypodiaceae of Christensen¹ in to 7 orders one of which the polypodiales now consists of 5 families (Dipteridaceae, Cheiroleuriaceae, Polypodiaceae, Loxogrammaceae, Grammitidaceae), all of them were grouped in one family the Polypodiaceae².

Nayar^{7,8} divided Christensen's Polypodiaceae into 20 families, one of which the Polypodiaceae consists of 5 subfamilies (Platyceroideae, Pleopeltidoideae, Polypodiodeae, Microsorioideae, Crysphaloideae). He considered Dipteridaceae,

Cheiroleuriaceae, Loxogrammaceae and Grammitidaceae as distinct families thus Nayar divided Copeland's Polypodiaceae into 5 families (Cheiroleuriaceae, Dipteridaceae, Loxogrammaceae, Polypodiaceae and Grammitidaceae). Bierhorst⁹ divided Copeland's Polypodiaceae into 3 families i.e., Dipteridaceae, Cheiroleuriaceae, Polypodiaceae. Crabbe *et al.*¹⁰ divided Copeland's Polypodiaceae into 4 families Cheiroleuriaceae, Dipteridaceae, Polypodiaceae, Grammitidaceae with Polypodiaceae into 5 subfamilies (Drynarioideae, Platyceroideae, Microsorioideae, Pleopeltidoideae, Polypodiodeae). Ching¹¹ divided Copeland's² Polypodiaceae into 7 families (Dipteridaceae, Cheiroleuriaceae, Polypodiaceae, Drynariaceae, Platyceriaceae, Grammitidaceae, Laxogrammaceae), of which the polypodiaceae has been subdivided into 5 subfamilies i.e., Polypodiodeae, Lepisoroideae, Pyrrhosioideae, Crysphaloideae, Microsorioideae. Nayar^{7,8} separated Grammitidaceae from Gleicheniales stock and placed it near Thelypteridaceae instead of Polypodiaceous fern.

Satija and Bir¹² presented a comprehensive summary of the known Polypodiaceous ferns from the present political boundary of India. They have adopted the classification of Pichi Sermolli⁶ and enumerated 130 species of Polypodiaceae in the book. During the course of our studies on Polypodiaceous ferns it has been observed that there are several nomenclatural confusions which have been rectified in the present work. During the preparation of this work, several nomenclatural equivalents are given for plant names appended in Satija and Bir¹², which are presented here strictly following

the same order of scheme of classification as presented by Satija and Bir¹².

The nomenclatural changes recorded are based on literature in addition to our own observation on the Indian ferns. The plant names used by Satija and Bir¹² are quoted as such in light face capital letters (non italic) and are followed by the valid nomenclatural equivalent printed in bold face along with citation of literature. Following each of the valid name, reference is made to the original validity published citation on which the

plant has been based (basionyms) or on the basis of which the name is conserved as per International Code of Botanical Nomenclature. The numbers, given after each species included here in bold face are the page numbers of Satija and Bir¹². The available information on the latest nomenclature has been incorporated.

It is hoped that this work will be helpful to the research students who can save much of their labour and time hunting for the valid names.

Distribution : Kashmir, Garhwal.

GONIOPHLEBIUM (Bl.) Presl

G. mengtzeense (Christ) Rodl-Linder in Blumea 34(2): 394. 1990.

Basionym : *Polypodium mengtzeense* Christ in Bull. Herb. Boiss 6: 869. 1898.

Distribution : Sikkim, Meghalaya.

G. persicifolium (Desv.) Bedd., Suppl. FSI and FBI 21. 1876.

Basionym : *Polypodium persicifolium* Desv. in Mag. Ges. Naturf. Berlin 5: 316. 1811.

Distribution : Assam.

COLYSIS Presl

C. macrophylla (Bl.) Presl, Epim. Bot. 147. 1949; Thothathri et al., J. Bombay Nat. Hist. Soc. 74: 249. 1977.

Basionym : *Grammitis macrophylla* Bl., Enum. Pl. Jav. 119. 1828.

Distribution : Great Nicobar Isl.

C. selligaea (Mett.) Ching in Sunyatsenia 5: 261. 1940; Thothathri et al., J. Bombay Nat. Hist. Soc. 74: 251. 1977.

Basionym : *Polypodium selligaea* Mett., Poly. 3 tab., 214. 1857.

Distribution : Nicobar Island

C. beddomei Manickam et Irudayaraj in Taxon 46: 267. 1997.

Distribution : Andhra Pradesh, Tamil Nadu.

DRYNARIA (Bory) J. Sm.

D. bonii Christ in Phanerogamie 1: 186. 1909; Roos, Drynarioideae 261. 1985.

Distribution : Assam, Manipur

PHYTOMATOPTERIS Pic. Ser.

P. nepalensis (Nakaike) S. Chandra, The Ferns India 416. 2000.

Basionym : *Crypsinus nepaelensis* Nakaike in Bull. Sci. Mus. Tokyo Ser. B 13(13): 95. 1987.

Distribution : Darjeeling.

PHYMATOSORUS Pic. Ser.

P. beddomei S. R. Ghosh in J. Econ. Tax. Bot. 6(2): 434. 1985.

[= *P. cuspidata* (D. Don) Pic. Ser. in Fras.-Jenk., New Sp. Syndr. Indian Pterid. 198. 1997.]

Distribution : Tamil Nadu, Kerala.

P. malabaricus (Nayer et Geevarghese) Geevarghese ex Nampy et Madhusoodanan in Fern Gaz. 14(7): 233. 1994.

Basionym : *Microsorium malabaricum* Nayer et Geevarghese, Fern Fl. malabar 399. 1993.

Distribution : Kerala (Malabar).

Excluded/Doubtful Taxa

Photinopteris speciosa (Bl.) Presl, Epim. Bot. 264. 1849; Nayar & Kaur, Comp. Bedd. Handb. 103. 1974. [p. 87].

Lepisorus oosphearius (C. Chr.) Ching in Bull. Fan Mem. Inst. Biol. Bot. 4: 70; 1933. [p. 31].

Phymatosorus benergiana (Pal et Pal) Pic. Ser. in Webbia 31: 249. 1977. [p. 69].

Microsorium hymenodes (Kze.) Ching in Bull. Fan Mem. Inst. Biol. (Bot.) 4: 295. 1933. [p. 74].

Dipteris conjugata Reinw., Syll. Pl. 2: 3. 1824; C. Chr., Index Fil. 243. 1905. [p. 91].

Acknowledgements

We wish to record our grateful thanks to the Director, National Botanical Research Institute, Lucknow for providing facilities without which this work would not have been possible.
